#4 – 10145 Dallas Drive, Kamloops, BC V2C 6T4
Telephone (250) 573-3611 Fax (250) 573-5155

SCHEDULE 6

Slash Disposal.

1. Construct the fence on or near the right-of-way centre line as per existing fence line. Quad access required on the wire side and horse and rider access on the other.
2. Disposal of right-of-way slash is as directed by BCCAPDI representative.
 - Fell any dead, defective, or leaning trees likely to fall across the fence and dispose of the slash.
 - All slash and debris must not be left on the cleared 5 meter right of way.
 - Lop off all branches from the tops of all trees and buck the remainder of the tree into lengths so each section of the tree makes contact with the ground.
 - If required pile and burn all debris. Every 100 m (330 ft.) or as necessary, make a push out in which the right-of-way debris can be piled. The push out should be large enough to allow for a cat blade width strip between the standing timber and the debris pile.
 - All debris must be disposed of to meet wildfire abatement as per requirements of MFLNRORD and directed by BCCA PDI representative.
3. Seed all disturbed soils on the fence right-of-way with a suitable grass mix approved by the Forest Service.
4. Water diversion bars may be required on steep sections of the right-of-way as assessed by a Forest Officer.
5. Where bark beetles are a problem, felled trees should be bucked, lopped, and scattered to eliminate beetle brood habitat. Stumps must be cut at ground level.
6. The BCCA PDI representative will be responsible for the final approval of slash disposal
